Projects

Exam Result Management System

- Designed a GUI-based application to determine candidate pass or fail status using C++ in Visual Studio.
- Integrated Microsoft SQL Server for retrieving and updating marks from the database.

Offline Hospital Appointment Scheduling System

- Developed a GUI-based application for patient appointment registration using C++ in Visual Studio.
- Utilized Microsoft SQL Server for managing patient and recipient details in the database.

Comprehensive Inventory Management System

- A Python-based application designed to streamline and manage inventory for businesses or personal use.
- Features include product tracking, stock level management, and efficient inventory control.
- Built with a user-friendly interface using Tkinter for graphical interaction.

Heart Failure Survival Analysis Dashboard – Tableau Project

- Developed an interactive Tableau dashboard with 14 charts to analyse heart failure survival factors using Kaggle clinical data.
- Highlighted key risks like age, ejection fraction, and comorbidities through user-friendly, dynamic visualizations.

SupplySync – Streamlining Supply Chain Efficiency with BI - PowerBI

- Designed and tested BI dashboards using Power BI for real-time supply chain analytics and forecasting.
- Performed **unit, integration, and performance testing** to ensure data accuracy, reliability, and system scalability.
- Validated dashboards and reports against requirements, ensuring usability and defect-free deployment.
